

FinCalc Application Penetration Test Attestation

Web Application Penetration Test of the O&M Pension Solutions FinCalc application, July 2021.

Executive Summary

O&M Pension Solutions (O&M Pensions) commissioned Arcturus in May 2021 to evaluate the security threats and risks associated with the security controls in place to protect users of the FinCalc web application.

Arcturus consultants performed a security assessment of the application from the viewpoint of both an authenticated and unauthenticated malicious attacker.

Subsequent to this engagement, Arcturus performed a retest of the application in July 2021 to ensure vulnerabilities discovered had been remediated.

Overall, the security measures evaluated in the scoped environment were found to be excellent. The available data and threat environment at the time of testing indicate that the likelihood of an attacker realistically exploiting any of the application's components is low.

Arcturus are a leading cyber security consultancy holding CREST and CHECK accreditations. We are part of The Cyberfort Group, which brings together leaders in the field of data security. We are built on the three pillars of information security which combine to deliver complete data assurance.

Attestation

With this report Arcturus attests that we have reviewed the Applications listed in the "Scope of Work" section below, for security weaknesses. As of July 2021, the security measures in the FinCalc application are effective and O&M Pensions strive to improve their application's security wherever possible.

The application security measures in place prevent unauthorised access to the application, information leakage and data misuse/theft. Security controls within the application have been implemented using best practices which are aligned with industry-accepted security practices.

Scope of Work

The following application was assured during the assessment:

-
- app.fincalc.co.uk
-
