

# Income Tax Calculator

## What is the Income Tax Calculator?

Our Income Tax calculator allows you to clearly show a full and comprehensive breakdown of incomes and detailed deductions, not just for the current tax year but also the previous and next year.

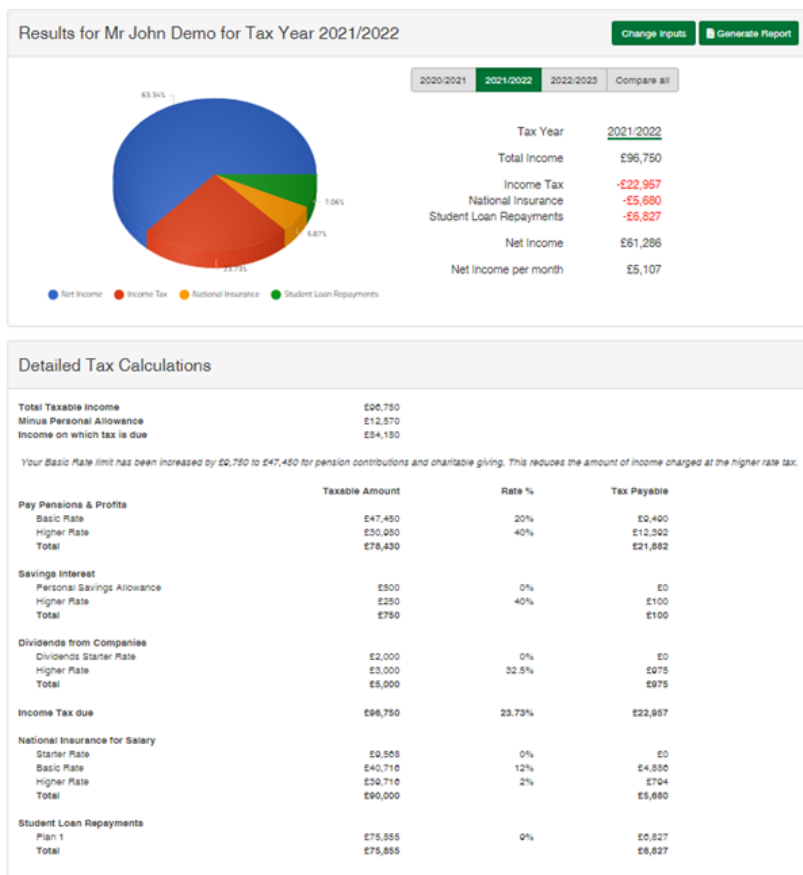

Covering scenarios such as self-employment, dividend income, student loan repayments as well as employment benefits in kind and the impact of pension contributions and gift aid charitable giving, this calculator is one of the most sophisticated income tax calculators around.

We have also included an option to import the relevant financial information from the Cashflow Modeller to provide a swift analysis of the client's income tax position.

## How to use the Income Tax Calculator?

Simply enter the gross incomes your client receives, as well as any pension contributions, charitable giving, and if they make any student loan repayments, then confirm which Plan(s) it belongs to. If your Client has a Cashflow you can import their information from the Cashflow directly into the Calculator.

You also have the ability to input these figures as per the frequency your client receives them.

## How to review the Income Tax Calculator results?

On this screen you can select either this tax year, last tax year or next tax year. Doing so will provide you with a summary of the totals within that year, and a pie chart to see your total incomes for the selected year. You also can compare all three tax years.

Within each option you will also be able to see the detailed breakdown of the tax calculations.
